Monthly Support Newsletter

Welcome

Welcome to the February Edition of Inside Wise.

It has been a busy couple of months since the madness of the Christmas break with Service Packs, Updates and new releases of the products.

We have seen new versions of the Revit Products, New Releases of CostX and many others. At this time of the year we are moving toward the 2009 Release of the Autodesk Range. As things come to hand we will let you know what is happening and when. Stay Tuned.

I would like to know what you think of Inside Wise. Is it of Benefit to you and your business. Would you like to see other information, included. Please let me know by emailing wise@karelcad.com.au I wish to ensure that Inside WISE is providing the information and value to you and your business.

Regards

*Kevin Hawkins
National Support Manager*

WISE Details

As we are increasing the Usage of the WISE System! Once again I have placed the details below. Please take the chance to set this up.

I would invite all users to discuss amongst your organisation the best way to apply your username. Be it individual logins or a group login for the entire organisation. If you have any questions please do not hesitate to contact your Customer Service Representative, or discuss with your Support Technician when you next speak to them.

To login and allow you to use the system below is a link to the site. Please feel free to setup a username and start logging. Once you have a username you are able to log calls directly via the site or you may still call or email us. If calling please have your Username ready to supply to the Administration Team to ensure the calls are logged to your correct organisation details and allow you to monitor the call effectively.

Regards

The KarelCAD Team

Top 10 Issues

This section is a listing of the top 10 Issues raised with Support over the last month.

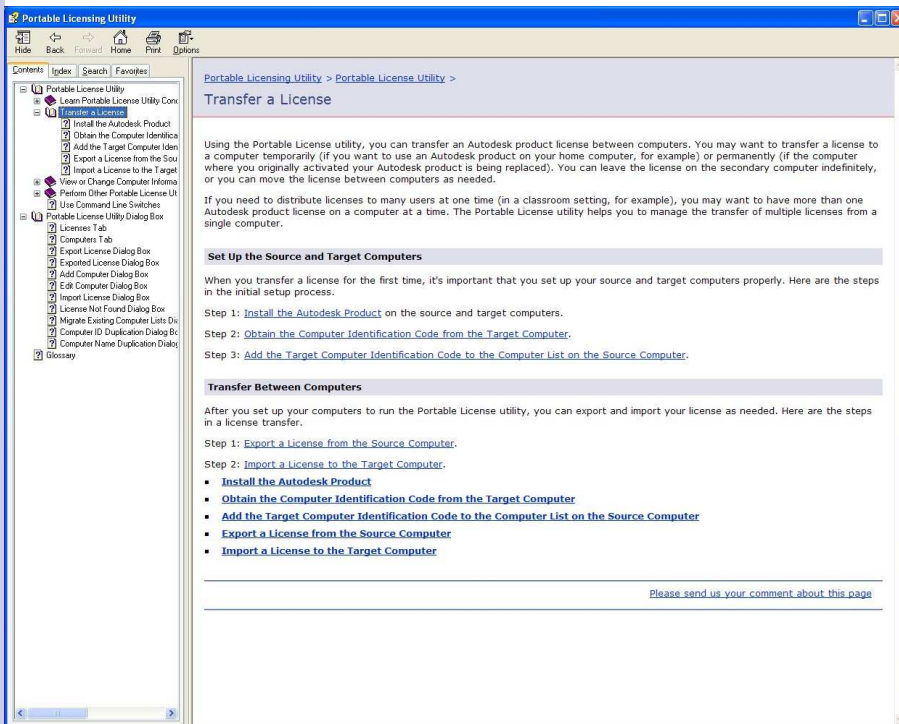

Number 1. (CostX)

After installing the latest Version of the CostX Network Version you are unable to access any licences.

This will be due to not renewing the licence of the Server. Please login to the CostX Admin application. Select the Licences tab and renew your licence. This will update the licence to the new version and allow access from the clients.

Number 2. (All Autodesk Products)

We are receiving more request's as to how to utilize a Standalone Licence that is installed on a desk top on a laptop while in the field and then return it to the desktop on return. Or Utilise the licence at home and then return it to work.

This can be achieved by using the Portable License Utility. This is found under Start> Programs > Autodesk > <Product Name> > Portable License Utility. The exact steps can be found in the Help button at the bottom right of the screen.

Number 3. (All Autodesk Product) ACTIVATION AND PREVIOUS VERSION USAGE

We are consistently receiving request's to activate previous version's of Autodesk products.

The allowance to utilize previous version's of the products is allowed under the Term's of the Subscription Contract. In this respect you are allowed to use upto the total number of licences that you have on subscription and not above. If you have 5 AutoCAD's you could install 2 2006 version and 3 2008 version. However you cannot have 5 2006 and 5 2008.

To facilitate this activation you will need to contact the KarelCAD Customer Services Team and organize the complete of a Previous Usage Exception form. This formalize the number of seats required and details. Once this is completed a request can be placed to KarelCAD support to arrange the activation codes.

Top 10 Issues cont.....

Number 4. (Civil 3D and Advanced Road Design)

After installing the New 2008 version of the Advanced Road Design product. You open an existing job and there is nothing in the vertical grading editors.

This is due to the new version of the Advanced Road Design storing the data in a new format and location. Our recommendation is to complete an existing designs on the Existing Advanced Road Design software and start new projects on the new version. Please ensure that you have logged into www.cadapps.com.au and downloaded the latest version of the Advanced Road Design product.

Number 5. (AutoCAD) Republish due to ongoing issue.

When opening files in the 2008 version of the product that contain Xrefs are opening slowly.

This can be caused by the number of scales coming in from the Xref files and them being duplicated. This can be corrected by loading the Service Pack 1 for AutoCAD 2008.

Once the service pack is installed on any existing drawings please use the following routine.

From modelspace

1. -scalelistedit
2. reset
3. yes
4. Exit

You can create a script from this and use scriptpro to run this over all effected drawings.

Number 6. (CostX)

You are receiving an error message "Invalid exception caught in OCX. Please save all your work and restart the program.

We have seen a number of error's along these lines in the 2.70 version of the product. These have been rectified in the 2.71 version of the product. If you are under maintenance these can be accessed from the Exactal website

Standalone Versions

<http://techweb.exactal.com/downloads/index.php?void=1&productCat=5>

Network versions

<http://techweb.exactal.com/downloads/fetch.php?download=6>

Number 7. (Revit)

You wish to Create a beam in Revit that has a Tapered end on it. Without modeling the entire item.

1. After you have created your beam.
2. Select the Modeling Panel > Opening > Opening by Face
3. Then you mouse over the face of the beam that needs to be Filleted or Tapered (it will highlight in green)
4. Then sketch the shape of the taper. Complete this in the appropriate plane e.g Left or Right elevation to do a top to bottom taper.
5. Make sure its all closed loops and click FINISH SKETCH.

This will result in a tapered beam.

Inside WISE

Top 10 Issues cont....

Number 8. (All Autodesk Products)

You wish to know if your Autodesk product is supported on Vista 32 or 64 Bit.

Not all the Autodesk Range of products are supported on the 64 Bit platform at this stage. Below is a link to an Autodesk white paper that details the Vista Support at this stage

<http://usa.autodesk.com/adsk/servlet/index?siteID=123112&id=10676494>

Number 9. (Civil 3D)

We have received a number of Queries in respect of Transforming Civil 3D point objects from one Coordinate system to another via a csv file. When doing the transformation the files do not get transformed.

This is generally due to the Formatting of the Point format not being correct. When setting the values in the file you will need to select the Grid Northing and Grid Easting. This allows the transformation between the zones. Select Easting and Northing does not allow the calculations to be completed.

Number 10. (Map)

Map is not performing well when Feature Labels are applied.

1. To improve the Display Manager performance for feature labels
2. In Display Manager, right-click the feature layer that contains the feature labels.
3. On the Shortcut menu, click Edit Style.
4. In the Style Editor, under Scale Ranges, click Duplicate.
5. For the first scale range, specify a new To value, but leave the From value set to 0.
6. Specify a new From value for the second scale range, but leave the To value set to Infinity.
7. Select the first scale range.
8. In the Style area, click Feature Label, and then make sure that the Create a label check box is selected. Click OK.
9. Select the second scale range.
10. In the Style area, click Feature Label, and then make sure that the Create a label check box is not selected. Click OK.
11. Close the Style Editor.
